Summary

Data Engineer who turns scattered data into reliable platforms the business uses to decide. I design and build end-to-end data solutions on Azure Synapse, Power BI and Power Apps (ETL pipelines, modelling, storage and reporting layers) and carry the data into the application with .NET C# backends and BPMN process models. Almost four years in data, from technical support to analyst and team lead. Growing into lakehouse and multi-cloud architectures with Microsoft Fabric, Databricks and Google Cloud.

Experience

Data Engineer — *Barranquilla, Colombia*
OMBIA — *Jul 2026 – present*

- Migrating the legacy SQL reporting catalogue to a new commercial platform: inventoried reports by execution volume and difficulty, rewrote the SQL scripts, and consolidated overlapping order reports into two with shared fields and filter-based differences.
- Tune Azure Synapse dedicated SQL pool workloads with CTAS for parallel transformations, hash distribution on join keys and clustered columnstore indexes for analytical queries.
- Analysed 30+ legacy workflows with SQL against production execution logs (up to 354K runs per flow) and removed branches that never ran, cutting an approval flow from 13 tasks to 6.
- Modelled the new flows in BPMN on Camunda 7 and implemented them in the .NET C# backend, connected to endpoints, with GitHub for version control.
- Deliver business reporting in Power BI and data-capture apps in Power Apps; ramping up on Microsoft Fabric ahead of the platform move.

Team Lead – Data Analyst — *Barranquilla, Colombia*
Verizon account · Quantica BPO, then Allied Global — *Mar 2024 – Jul 2026*

- Led a team of three analysts in Risk & Assurance for Verizon, coordinating workloads, priorities and deadlines in Asana and structuring delivery with Scrum.
- Monitored KPIs daily and investigated anomalies with Python and SQL, surfacing about 2 incidents a day and 20 fraud cases a week for escalation.
- Built and maintained about 30 dashboards, reports and monitors; Looker Studio gave stakeholders interactive dashboards and scheduled reports on multi-source and streaming data.
- Designed and automated data pipelines and ETL processes in Mobileum RAID, managing end-to-end data flows and alerts; automating recurring reports cut the hours spent on them by about 90%.
- Turned business needs into Jira stories and new monitors, and documented the processes. Promoted to Team Lead.

Freelance Web Developer — *Remote*
Mallas Atlanta — *May 2024 – Aug 2024*

- Designed, built and deployed alone the website of a safety-net installation company, in React and TypeScript with Mantine and custom CSS. The site is live.

Data Analyst — *Barranquilla, Colombia*
Verizon account · Quantica BPO — *Sept 2023 – Feb 2024*

- Business assurance and fraud management for Verizon with Python, SQL, Power BI and Excel, identifying patterns that affected business processes.
- Traced data paths across databases to find trends and anomalies early; produced analyses and reports across timeframes and tracked issues in Jira.

Technical Support, Tier 1 to Tier 3 *Barranquilla, Colombia*
Quantica BPO *Aug 2022 – Aug 2023*

- Promoted twice in a year, from first-line technical support to the corporate Tier 3 desk; diagnosed connectivity and service issues and escalated with engineering teams.

Education

Universidad de la Costa (CUC) *Feb 2022 – Sept 2026*
BSc in Systems Engineering, with merit

Universidad del Norte *Mar 2021 – Dec 2021*
Software development programme, MinTIC (programming, software and mobile development)

Universidad del Atlántico *Aug 2018 – Dec 2021*
English as a second language, B2

Servicio Nacional de Aprendizaje (SENA) *Feb 2018 – Dec 2020*
Technical degree in Payroll and Social Benefits

Publication

Dynamic Models of Knowledge-Based Growth: Evidence of Bidirectional Causality Between GDP and R&D Efficiency in Latin America *2026*
Procedia Computer Science, Elsevier. Econometric study using Granger causality, VAR/VECM, ARDL and 2SLS/3SLS models.

Certifications

Fabric Foundations (Microsoft)	*Sept 2026*
Fundamentals of Azure Databricks (Packt)	*Aug 2026*
Building RAG Apps Using MongoDB (MongoDB)	*Mar 2026*
BI Dashboards with IBM Cognos Analytics and Google Looker (IBM)	*Oct 2025*
Data Warehouse Fundamentals (IBM)	*Aug 2025*
ETL and Data Pipelines with Shell, Airflow and Kafka (IBM)	*May 2025*
Relational Database Administration (IBM)	*Mar 2025*
Hands-on Introduction to Linux Commands and Shell Scripting (IBM)	*Feb 2025*
Databases and SQL for Data Science with Python (IBM)	*Feb 2025*
Introduction to Relational Databases (IBM)	*Jan 2025*

Skills

Languages: Spanish (native), English (B2)
Data platforms: Azure Synapse, Azure Data Factory, Microsoft Fabric, Databricks, BigQuery, Snowflake
Databases & SQL: SQL, PostgreSQL, Oracle, data modelling, data warehousing
Pipelines: ETL, Airflow, Kafka, Mobileum RAID, shell scripting, APIs, web scraping
Python: Pandas, NumPy, PySpark, Matplotlib, scikit-learn
BI & apps: Power BI, Power Apps, Looker Studio, Excel, Google Sheets
Development: C# / .NET, BPMN on Camunda 7, React, TypeScript, NestJS, Git and GitHub
Ways of working: Scrum, Jira, Asana, stakeholder communication, team leadership, documentation

Extracurricular Activities

- Member of the Universidad de la Costa choir and of a tuna group; vocal technique and swimming.
